

RENAISSANCE IPO ETF

A SERIES OF RENAISSANCE CAPITAL GREENWICH FUNDS

Summary Prospectus

Symbol: IPO

January 31, 2017

Before you invest in the Renaissance IPO ETF (the “Fund”), you may want to review the Fund’s prospectus, which contains more information about the Fund and its risks. The Fund’s prospectus and Statement of Additional Information, both dated January 31, 2017, are incorporated by reference into this Summary Prospectus. You can obtain these documents and other information about the Fund online at www.renaissancecapital.com/ipoinvesting/iposetf/doccenter.aspx. You can also get this information at no cost by calling 1-866-486-6645 or by sending an email request to renaissance@renaissancecapital.com.

INVESTMENT OBJECTIVE

The Renaissance IPO ETF (the “Fund”), a series of Renaissance Capital Greenwich Funds (the “Trust”), seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Renaissance IPO Index (the “Index”).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (“Shares”).

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fee	0.60%
Distribution and Service (12b-1) Fees*	None
Other Expenses	<u>0.00%</u>
Total Annual Fund Operating Expenses	<u>0.60%</u>

*The Board has adopted a 12b-1 Plan but no 12b-1 fees are being charged.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund. The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

YEAR	EXPENSES
1	\$61
3	\$192
5	\$335
10	\$750

PORTFOLIO TURNOVER

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when the Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, may affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 109% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Index. The Index, designed by IPO research firm Renaissance Capital International, LLC (the “Index Provider”), is a portfolio of companies that have recently completed an initial public offering (“IPO”) and are listed on a U.S. exchange. IPOs are a category of unseasoned equities under-represented in core equity indices. IPOs that meet liquidity and operational screens are candidates for inclusion in the index. Sizable IPOs are included within the first several weeks of trading, or upon quarterly reviews, weighted by tradable float, and capped at 10%. Securities that have been public for two years are removed at the next quarterly review. The Index has been constructed using a transparent and rules-based methodology.

The Fund normally invests at least 80% of its total assets in securities that comprise the Index. Depositary receipts representing securities that comprise the Index may count towards compliance with the Fund’s 80% policy. The Fund may also invest up to 20% of its assets in certain futures, options, and swap contracts, cash and cash equivalents, as well as in common stocks not included in the Index but which will help the Fund track the Index. Convertible securities and depositary receipts not included in the Index may be used by the Fund in seeking performance that corresponds to its Index and in managing cash flows.

The Index is comprised of common stocks, depositary receipts, real estate investment trusts (“REITS”) and partnership units. These securities may include IPOs of foreign companies that are listed on a U.S. exchange, as well as IPOs of companies which are located in countries categorized as emerging markets. As of September 30, 2016, the Index included 56 securities with total market capitalization of \$439 billion.

The Index Provider’s IPO research shows that shares of IPOs within two years of their offering are under-represented in core equity indices. The Index seeks to capture the unique returns from these unseasoned equities by including sizable IPOs in the Index within the first several weeks of trading, or upon quarterly reviews, and removing them at the quarterly review following their two-year anniversaries.

The Fund’s 80% investment policy is non-fundamental and requires 60 days’ prior written notice to shareholders before it can be changed.

The Fund, using a “passive” or indexing investment approach, attempts to approximate the investment performance of the Index by investing in a portfolio of securities that generally replicates the Index. Renaissance Capital LLC (the “Adviser”) expects that, over time, the correlation between the Fund’s performance before fees and expenses and that of the Index will be 95% or better. A figure of 100% would indicate perfect correlation.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Index concentrates in an industry or group of industries. Historically, information technology companies have represented a major industry group in the Index.

The Fund may lend securities to broker-dealers, banks and other institutions. When the Fund loans its portfolio securities, it will receive, at the inception of each loan, liquid collateral equal to at least 102% (for U.S.-listed securities) or 105% (for non-U.S.-listed securities) of the value of the portfolio securities being loaned.

PRINCIPAL RISKS OF INVESTING IN THE FUND

Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund’s Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund.

Risk of Investing in IPOs. The Fund invests in companies that have recently completed an initial public offering. The stocks of such companies are unseasoned equities lacking a trading history, a track record of reporting to investors and widely available research coverage. IPOs are thus often subject to extreme price volatility and speculative trading. These stocks may have above-average price appreciation in connection with the initial public

offering prior to inclusion in the Index. The price of stocks included in the Index may not continue to appreciate and the performance of these stocks may not replicate the performance exhibited in the past. In addition, IPOs share similar illiquidity risks of private equity and venture capital. The free float shares held by the public in an IPO are typically a small percentage of the market capitalization. The ownership of many IPOs often include large holdings by venture capital and private equity investors who seek to sell their shares in the public market in the months following an IPO when shares restricted by lock-up are released, causing greater volatility and possible downward pressure during the time that locked-up shares are released.

Information Technology Risk. Information technology companies frequently represent the largest sector in the Index. Information technology companies are generally subject to the risks of rapidly changing technologies; short product life cycles; fierce competition; aggressive pricing and reduced profit margins; the loss of patent, copyright and trademark protections; cyclical market patterns; evolving industry standards; and frequent new product introductions. Information technology companies may be smaller and less experienced companies, with limited product lines, markets or financial resources and fewer experienced management or marketing personnel. Information technology company stocks, especially those which are internet-related, have experienced extreme price and volume fluctuations that are often unrelated to their operating performance.

Small and Mid-Capitalization Company Risk. The Fund invests in small and mid-capitalization companies. Such companies may be more vulnerable to adverse general market or economic developments, and their securities may be less liquid and may experience greater price volatility than larger, more established companies as a result of several factors, including limited trading volumes, products or financial resources, management inexperience and less publicly available information. Accordingly, such companies are generally subject to greater market risk than larger, more established companies.

Depository Receipt Risk. The Fund may hold the securities of non-U.S. companies in the form of American Depositary Receipts (“ADRs”). ADRs are negotiable certificates issued by a U.S. financial institution that represent a specified number of shares in a foreign stock and trade on a U.S. national securities exchange, such as the New York Stock Exchange. Sponsored ADRs are issued with the support of the issuer of the foreign stock underlying the ADRs and carry all of the rights of common shares, including voting rights. The underlying securities of the ADRs in the IPO ETF’s portfolio are usually denominated or quoted in currencies other than the U.S. Dollar. As a result, changes in foreign currency exchange rates may affect the value of the Fund’s portfolio. In addition, because the underlying securities of ADRs trade on foreign exchanges at times when the U.S. markets are not open for trading, the value of the securities underlying the ADRs may change materially at times when the U.S. markets are not open for trading, regardless of whether there is an active U.S. market for shares of the Fund.

REIT Risk. Investments in securities of real estate companies involve risks. These risks include, among others, adverse changes in national, state or local real estate conditions; obsolescence of properties; changes in the availability, cost and terms of mortgage funds; and the impact of changes in environmental laws. In addition, a REIT that fails to comply with federal tax requirements affecting REITs may be subject to federal income taxation, or the federal tax requirement that a REIT distribute substantially all of its net income to its shareholders may result in a REIT having insufficient capital for future expenditures. The value of a REIT can depend on the structure of and cash flow generated by the REIT. In addition, like mutual funds, REITs have expenses, including advisory and administration fees that are paid by their shareholders. As a result, you will absorb duplicate levels of fees when the Fund invests in REITs. In addition, REITs are subject to certain provisions under federal tax law. The failure of a company to qualify as a REIT could have adverse consequences for the Fund, including significantly reducing return to the Fund on its investment in such company.

Partnership Unit Risk. Investments in partnership units such as Master Limited Partnerships (“MLPs”) involve risks that differ from an investment in common stock. Holders of the units of MLPs have more limited control and limited rights to vote on matters affecting the partnership. There are also certain tax risks associated with an investment in units of MLPs. In addition, conflicts of interest may exist between common unit holders, subordinated unit holders and the general partner of a MLP, including a conflict arising as a result of incentive distribution payments.

Non-U.S. Issuer Risk. Certain companies in which the Fund may invest may be non-U.S. issuers whose securities are listed on U.S. exchanges. These securities involve risks beyond those associated with investments in U.S. securities, including greater market volatility, higher transactional costs, the possibility that the liquidity of such

securities could be impaired because of future political and/or economic developments, taxation by foreign governments, political instability, the possibility that foreign governmental restrictions may be adopted which might adversely affect such securities and that the selection of such securities may be more difficult because there may be less publicly available information concerning such non-U.S. issuers or the accounting, auditing and financial reporting standards, practices and requirements applicable to non-U.S. issuers may differ from those applicable to U.S. issuers.

Emerging Markets Risk. The Fund may invest a portion of its portfolio in securities of issuers located in emerging markets. Emerging market companies involve certain risks not associated with investing in developed market countries because emerging market countries are often in the initial stages of their industrialization cycles and have low per capita income. These increased risks include the possibility of investment and trading limitations, greater liquidity concerns, higher price volatility, greater delays and possibility of disruptions in settlement transactions, greater political uncertainties and greater dependence on international trade or development assistance. In addition, emerging market countries may be subject to overburdened infrastructures and environmental problems.

Equity Securities Risk. The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns.

Market Risk. The prices of the securities in the Fund are subject to the risk associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

Index Tracking Risk. The Fund's return may not match the return of the Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index. Because the Fund bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Index, the Fund's return may deviate significantly from the return of the Index. In addition, the Fund may not be able to invest in certain securities included in the Index, or invest in them in the exact proportions in which they are represented in the Index, due to legal restrictions or other limitations. To the extent the Fund calculates its net asset value ("NAV") based on fair value prices and the value of the Index is based on securities' closing prices, the Fund's ability to track the Index may be adversely affected.

Replication Management Risk. An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not "actively" managed, unless a specific security is removed from the Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

Premium/Discount Risk. Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholders may sustain losses.

Non-Diversified Risk. The Fund is classified as a "non-diversified" investment company under the Investment Company Act of 1940, as amended (the "1940 Act"). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single company. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds. The Fund may be particularly vulnerable to this risk because it seeks to replicate an index that is comprised of a limited number of securities.

Concentration Risk. The Fund’s assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Index concentrates in a particular sector or sectors or industry or group of industries. The Fund may be subject to the risk that economic, political or other conditions that have a negative effect on that industry will negatively impact the Fund to a greater extent than if the Fund’s assets were invested in a wider variety of sectors or industries.

Securities Lending Risk. The Fund may engage in securities lending. Securities lending involves the risk that the fund may lose money because the borrower of the Fund’s loaned securities fails to return the securities in a timely manner or at all. The Fund could also lose money in the event of a decline in the value of the collateral provided for the loaned securities or a decline in the value of any investments made with cash collateral. These events could also trigger adverse tax consequences for the Fund.

Authorized Participant Concentration Risk. Only an authorized participant may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as authorized participants. To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other authorized participant is able to step forward to create or redeem Creation Units (as defined below), Fund shares may trade at a discount to NAV and possibly face trading halts and/or delisting. This risk may be more pronounced in volatile markets, potentially where there are significant redemptions in ETFs generally.

PERFORMANCE

The bar chart that follows shows how the Fund’s performance has varied from year to year. The table below the bar chart shows the Fund’s average annual returns (before and after taxes) and provides some indication of the risks of investing in the Fund by comparing the performance of the Fund over time to the performance of the underlying index, and a broad-based market index (S&P 500 Index). The Fund’s past performance (before and after income taxes) is not necessarily an indication of how the Fund will perform in the future.

The Fund’s highest quarterly return was in the third quarter of 2016 with a return of 9.59%. The Fund’s lowest quarterly return was in the third quarter of 2015 with a return of -17.36%.

**Renaissance IPO ETF Average Annual Total Returns
for periods ended December 31, 2016:**

	<u>One Year</u>	<u>Since Inception (10/14/13)</u>
Return Before Taxes	(0.16)%	2.05%
Return After Taxes on Distributions*	(0.27)%	1.67%
Return After Taxes on Distributions and Sale of Fund Shares*	(0.02)%	1.43%
Renaissance IPO Index (reflects no deduction for fees, expenses or taxes)	0.32%	2.96%
S&P 500 Index (reflects no deduction for fees, expenses or taxes)	11.96%	11.20%

* After-tax returns were calculated using the historically highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor’s tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold Shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

PORTFOLIO MANAGEMENT

Investment Adviser. Renaissance Capital LLC.

Portfolio Managers. The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

Name	Title with Adviser	Date Began Managing the Fund
Linda R. Killian	Portfolio Manager	Since inception
William K. Smith	Head Trader	Since inception

SUMMARY INFORMATION ABOUT PURCHASES AND SALES OF FUND SHARES AND TAXES

PURCHASE AND SALE OF FUND SHARES

The Fund issues and redeems Shares at NAV only in a large specified number of Shares each called a "Creation Unit," or multiples thereof. A Creation Unit consists of 50,000 Shares. Creation Units are sold to and from institutional brokers through participation agreements.

Individual Shares of the Fund may only be purchased and sold in secondary market transactions through brokers. Shares of the Fund are listed on NYSE Arca, Inc. (the "Exchange") and because Shares trade at market prices rather than NAV, Shares of the Fund may trade at a price greater than or less than NAV.

TAX INFORMATION

The Fund's distributions are taxable and will generally be taxed as ordinary income or capital gains, unless you are investing through a tax-deferred account such as an IRA or 401(k). Dividends and capital gains on Fund shares invested in a tax-deferred account will be taxed when withdrawn from the tax-deferred account.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Adviser and its related companies may pay the intermediary for the sale of Fund Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer, salesperson or other intermediary or its employees or associated persons to recommend the Fund over another investment. Ask your financial adviser or visit your financial intermediary's website for more information.
